

15mSNS Burkhalter 2005-2006

Specifications

This project is our last-born design in this ancient and elegant small metric class, typical of the swiss lakes since 1933 (read the story in website of the class) .

The hull shape profits from the learning from the up-to-dated America's Cup Class inputs, and the construction in laminated wood benefits from the know-how of the famous "Bouboule".

The boat is available in different versions, in which "natur lackiert" hull and teak deck for the most luxurious, and sandwich glass-epoxy out of a female mould for the economic one.

Please feel free to contact Jean-Francois Burkhalter for any further informations by phone (+41 24 425 7464) or by fax (+41 24 426 32 53).
